(a)
(b)
$H = D^{6/7}$
$H = D$
random signs (range over 5 runs)
Möbius, $D = 20,000$
Möbius, $D = 80,000$
Möbius, $D = 320,000$
$R = \sum |A_u|^2 / \sum \text{mass}_u$
row range exponent κ $(H = D^\kappa)$
Möbius family (measured)
multiplicative-energy prediction
random signs (measured)
complex Gaussian
$\mathbb{E}|A_u|^4 / (\mathbb{E}|A_u|^2)^2$
column scale D
